About the Company:

UmbraCity is an innovative and a fast-growing startup that provides on-demand access to umbrellas in communities. We have created networks of fully automated umbrella rental kiosks that allow users to borrow umbrellas from a kiosk and return it to any other kiosk. This concept has successfully been piloted at the University of British Columbia in Vancouver, BC, and we are ready to take UmbraCity to the next level.

About the Role:

UmbraCity is seeking a full-time contract Android developer to join our team for a 4-month period with the possibility of extension based on performance. We are looking for a candidate with strong skills in Android mobile application and back-end development to join our innovative development team. We need someone who is looking to grow their skill-set, wants to learn more about development best practices, and understands that the work is time-sensitive. A positive attitude and a great sense of humor will go far with our team. The potential candidate needs to be an efficient problem solver.

If you think you've got what it takes, apply with your resume and a cover letter explaining why you want to work here and why we should hire you.

Job Description:

The Developer will work with other developers to create and maintain mobile applications, and/or back-end systems. An eagerness to experiment with new coding techniques and/or standards is appreciated and staying abreast of new developments in technology is critical.

Desired Experience:

- Strong experience in computer science and software engineering.
- Experience in developing Android mobile apps.
- Experience with REST API integrations using Volley (Android).
• Experience with at least one server-side/scripting language such as PHP, Python, C# or Java.
• Back-end engineering track must have working knowledge of RESTful APIs.
• Ability to debug programs and collaborate with team members to overcome technical problems.
• Experience with Git.

To apply, please send your resume and cover letter to careers@umbracity.com and use “Android Developer” as the email subject.
