AquaNow is a fast-growing FinTech company that provides best-in-class execution platform and institutional-quality trading solutions via a single point of access across different crypto exchanges and marketplaces. We are seeking developers that can adapt quickly and assist in the development of our vision. This is a unique opportunity to work with a highly experienced team in an innovative early stage start-up environment.

Responsibilities:

- Contribute to the development and testing of server-side applications along with all features and major releases.
- Building highly scalable applications on the AWS using services like API Gateway, Lambda, ElastiCache, SQS, DynamoDB, Kinesis and ECS
- Demonstrates good software design and testing practices Ensure all code written have been successfully tested from unit, integration and end to end, making every effort to automate all the tests.

Requirements:

- Experience with Node.js & Python
- Design and develop Websocket and REST APIs
- Prepare and modify test scripts for unit and regression testing
- Conduct investigations related to deviations reported by testers
- Passion for delivering high-quality software with quick turnaround times.
- Value team work and encourage collaboration.
- Good verbal and written communication skills
