Full Stack Developer - Level 2
$69,900.80 - $79,791.25 annually plus 6.6% Temporary Market Adjustment effective April 14, 2019

British Columbia’s Natural Resource Ministries (NRM) are the stewards of the Province’s Crown land and natural resources which reflect the diverse values and interests of all British Columbians. To support the growth of the economy while providing effective environmental stewardship, the province’s NRM must transform in order to advance the shared management of British Columbia’s natural resources.

The Information, Innovation and Technology (IIT) Division is leading the modernization and transformation of business practices for the NRM through continuous improvement projects, new technology options and operational information management/information technology (IM/IT). The IIT Division is providing leadership for IM/IT planning, policy and business process solutions and is also the single authority for all information and technology across the NRM. The IIT Division also leads and supports the Natural Resource Permitting Project (NRPP), as it wraps up its work on streamlining processes and integrating decision-making through platforms like the Natural Resource Online Services (NROS) website.

This position will lead and coordinate application development teams in the application development lifecycle and in planning, designing, developing, testing, enhancing and maintaining mission critical applications of significant complexity (multiple platforms, environments and technologies requiring integration of new and legacy systems), and cost.

Qualifications for this role include:

- Degree, diploma or certificate in Computer Science or related discipline.
- Minimum one year of recent (within the last 5 years) experience as an application developer or equivalent.
- Experience with structured and/or object orientated programming in a complex rules based environment.
- Experience leading and participating in project teams including application developers, business area users and technical resources.
- Experience in a broad number of application development tools.
- Experience in data modelling, process modelling, and/or business area analysis techniques.
- Preference may be given to applicants with experience using Java.
- Preference may be given to applicants with experience in Oracle databases.
