About:
Profitable Software Inc. is a Vancouver-based start-up working in stealth mode. Our team is developing proprietary technology using machine learning and artificial intelligence to predict international economic trends.

Overview:
We are looking for creative, motivated, and talented young engineers to join us in building something from the ground up. This is a unique opportunity to work with a highly technology-focused start-up. You will be working hands-on to design and build essential features and gain in-depth knowledge in machine learning. We are a small and close-knit company, allowing you to interact closely and receive support from the whole team on a daily-basis.

Job Title:
Junior Software Engineer (Intern)

Responsibilities:
- Write high-quality code to support the functionality of the project framework
- Develop and test new features
- Proactively communicate on new ideas, suggestions, and bottlenecks with the entire team
- Learn and specialize in the machine learning framework
- Support ad-hoc tasks and projects as required

Requirements:
- Experience working with Python and C++
- Experience working under Linux environments
- Intellectual curiosity and ability to learn quickly
- Ability to self-organize and work independently
- Great interpersonal skills and able to work collaboratively within a team environment
- Passion for software programming and machine learning
- Responsible and patient in exploring and writing new code
- Interest in world economics and the public markets

Nice-to-haves:
- Experience with Ubuntu
- Experience with Github API integration
- Previous technical work experience is a plus, but not required
- Knowledge of data science or/and machine learning is a plus, but not required
- Knowledge of distributed systems is a plus, but not required

Other Information:
- This is a remote working position
- Must be a Canadian resident, preferably located in Vancouver
- Full transcript is required with application
