Software Engineer with CS50
Boston, Mass.

This is a software engineering role to work closely with CS50 at Harvard on the design, implementation, and deployment of ed-tech software, among them student- and TA-facing web apps and open-source command-line tools. Upcoming and new graduates are encouraged to apply.

Ideal candidates would have multiple years of experience with Python, SQL, HTML, CSS, and JavaScript as well as with Linux, Docker, and cloud services like AWS and devops more generally, as from past summer courses, projects, internships, or full-time work. The role itself would offer opportunities for experimentation with the latest technologies and would involve deployment of non-traditional solutions to pedagogical problems. Ideal candidates, too, would not only have a strong background in software but also an interest in the production of educational content.

To apply, email a note and resume to opportunities@cs50.harvard.edu. Applicants must be local (or able to relocate) to the Boston, Massachusetts area.
