Full-Stack Engineer

Who you are:

You are a technical, hands-on full stack web engineer with a high proficiency in developing digital products from start to finish. You have excellent knowledge of our core stack, have experience with big data and are a motivated self-starter. Most importantly, you are able to rapidly produce high quality code. You will be a key part of the team, working toward achieving our strategic goals through technology solutions. You are excited about an early stage growth sector with a metric tonne of potential.

Who we are:

Cannametrics is an early-stage technology company operating in the legal cannabis space providing insights and Business Intelligence to the legal cannabis industry. Our core products are retailer and producer-facing dashboards that help our clients understand the performance of their business through KPI and detailed reporting. We also run a product called Cannametrics Retailer that provides the industry’s best product profiles and is one of the only places that transparent, batch-level product data is made available. We presently serve over 1000 clients with our three main technology products.

We pride ourselves on our culture of kindness and dedication to one another and our work. We work in a fully remote environment and require a high degree of self organization and motivation.

Job Responsibilities:

- Working with the executives and the rest of the team, scope, code and implementing technology features.
- Run standardized automated testing into our development environment.
- Maintain a high level of organization in your work and the systems we use.
- Lead our development team, establishing and guiding best practices and expectations.
- Move from deep technical conversations on the pros/cons of various technical solutions, to a high level discussion with non-technical team members.
- Create, maintain and report timelined roadmaps, communicating expectations and high-level technology solutions across the organization.
- Build systems that enable our team to deliver on concurrent projects through detailed projections and tracking.
- Work with our designers and customer service team to understand our customers needs and prioritize high ROI solutions and approaches to addressing them.

**Development Stack:**

- .NET Core / 5.0 / 6.0, .NET Web API, MVC, Entity Framework, C#
- Angular, Javascript, Typescript, CSS, HTML
- SQL, Azure, Microservices

**Qualifications:**

- Bachelor's degree in one of the following areas: computer science, engineering, or related field.
- 2+ years hands on experience architecting/developing digital products.
- 2+ years experience in our back-end development stack.
- 2+ years experience in our front-end development stack.
- Familiarity with integrating and supporting features provided by external API's or libraries.
- Proficient in usage of source code management such as Git, as well as working knowledge of devops practices (e.g. continuous integration/delivery).
- Exceptional project management and leadership skills.
- Excellent verbal and written communication.

- Nice to have: Master’s degree completed or in-progress in computer science.
- *Note: we may accept exceptional projects and references in lieu of full experience.*

The right candidate will find themselves rapidly advancing as our company grows. It is anticipated that we will soon hire a junior to this position.

Annual Salary: $100,000 - 120,000 based on experience
Exceptional Benefits after 3 month probationary period

Must be a Canadian citizen or permanent resident.

**Interested candidates should submit a cover letter clearly outlining their qualifications with links to projects and 3 high quality references along with a resume to** eric@cannametrics.io
