Company description

Sisa Energy is a Startup that pushes the boundaries of energy performance improvement in the building sector. With engineering and data science expertise on board, we offer optimized energy solutions for every project's needs.

Job description

In this role, you are going to be mainly focused on:

• Creating software and system engineering solutions
• Designing, coding, testing, debugging and documenting codes
• Integration, testing, and deployment of software components into a full system
• Planning, estimating, and completing tasks on time

The ideal candidate

Would have following skills and attitudes:

• Willingness to learn
• Bachelor’s degree in Computer Science/Engineering or equivalent
• Software development tools and practices:
  o C# or Java design and development
  o Version control (e.g. Git)
  o Unit, component, and integration testing
  o Object-oriented design, data structures & algorithms, and software design patterns
• Strong algorithm development and math background is a bonus
• Strong analytical and problem-solving skills
• Ability to work on a diverse and dynamic team
